PROFILE

Recent computing graduate from the University of Dundee. I am a creative full-stack developer who's passionate about designing and developing user friendly websites from wireframing to UX and having the ability to bring that UX design to life. I am very interested in joining a company that follows a hybrid/agile development where I can learn more and develop my skills in a challenging environment.

EXPERIENCE

Web Developer, 09/2020 to 07/2021

University of Dundee - Dundee, UK

Honours Project

- Designed and developed a website for the cheese community which lets them store and share their thoughts with fellow enthusiasts.
- I solely developed the whole project using the hybrid methodology, a combination of the waterfall and agile for different stages of the project.
- I worked as a full-stack developer in charge of authentication and database management.
- I worked with bootstrap for frontend, PHP for backend along with MySQL for the database.
- Conducted quality assurance and gathered user requirements in the form of one-to-one interviews.

Web Developer, 02/2020 to 02/2020

Craneware Edinburgh & University of Dundee - Dundee, UK

Treatment Finder

- Challenged with creating an online application that lets patients search for affordable treatment based on the procedure, price, and location.
- I was assigned with creating the front-end of the website using bootstrap along with implementing backend features in Java Jakarta, which involved interacting with an SQL database.
- I created the feature where users to find the cheapest treatment using the price a range slider.
- We received great feedback from the clients as we were one of the very few teams who had a working version after the first sprint.

UX Designer, 10/2020 to 12/2020

University of Dundee - Dundee, UK

- Tasked to design and create high fidelity Adobe XD prototype for the virtual open day for new applicants.
- Followed the UX six-stage design process where we worked as a team to identify the user needs.
- Creatively transformed user requirements and research findings into a highly interactive Adobe XD prototype using the atomic design principles.
- We conducted a user evaluation on the design of our prototype in terms of usability and received good feedback.

EDUCATION

BSc. Hons : Applied Computing, 2021
UNIVERSITY OF DUNDEE
Second Class Honours

TECHNOLOGIES & FRAMEWORKS

- PHP
- HTML
- CSS
- SQL
- Bootstrap
- Javascript
- PhpMyAdmin
- Git/Github

SKILLS

- Full-stack Development
- UX
- Prototyping
- Teamwork
- Communication
- Wireframing
- User-Evaluation
- Requirement Gathering
- Databases
- Adobe XD
- Figma

METHODOLOGY

- Agile
- Hybrid
- Waterfall
